January 4, 1991

Joe Sweet, Mgr.  
Woodbury Lumber Company  
Forest St.  
Rutland, VT 05701

Dear Mr. Sweet:

On November 7, 1990, three underground storage tanks were removed from the Forest Street site of Woodbury Lumber Co. During these removals, petroleum contamination of soil and groundwater was reported by Site Investigator Marc Coleman of the Vermont Department of Environmental Conservation (DEC). After the tanks were removed, three monitoring wells were installed for use in monitoring of groundwater.

At this time, the DEC requests that Woodbury Lumber retain the services of a qualified laboratory to sample the wells and analyze the samples. These samples should be analyzed using EPA Methods 8020 and 418.1, and a copy of the results sent to the DEC, Hazardous Materials Division. The DEC will use these test results to decide whether or not further work needs to be done at this site regarding the petroleum contamination.

I have enclosed a list of environmental laboratories qualified to perform the requested work. If you have any questions regarding this letter, please call me or Marc Roy at 244-8702. Thank you.

Sincerely,

Chuck Schwer, Acting Chief  
Sites Management Section
